

Design and Technology

Reception

In reception we love creating and exploring different techniques to make models using a variety of equipment. When it is our birthday, we work together with 2 friends to make our own birthday cake.

Glue is good for sticking tissue, tape is too big for that job. Tape is good to use so things don't fall off. It was really tough to cut thick cardboard!

I have learned persistence because if it went a bit wrong I kept on trying until I worked it out.

I learned how to use a hacksaw safely and where to put my fingers so they don't get cut.

Year 1

Henry Adams Estate Agents come to school to launch our DT challenge. We design and make a shoebox room using recycled materials. We hold a 'Stay and Make' day where our parents can come in to help us make our furniture. It is a challenge and lots of fun!

Year 2

As part of our Great Fire of London topic, we work together in small groups to make timber framed houses. We measure the wood and cut it accurately to build the frame of the house. We take these houses outside to our fire pit, and watch as they are set on fire!
